

A Year 2000 Readiness Disclosure

NERC Y2K ELECTRIC SYSTEM READINESS ASSESSMENT

Notes page - for your use

Version 3.1

1. This workbook is **unlocked!** You may disassemble it for dissemination to others in your organization for them to prepare their section. (We still prefer that you not do this, but many organizations have requested this flexibility.)
This page is **unprotected!**
2. However, the recommended way to do the disassembly is to **MOVE** the particular page in question to a new workbook, don't copy it! The move command is found on the Edit pull-down menu.
3. When work has been completed on each section, **MOVE** it back into the original workbook.
Using this above procedure preserves the database linkages for NERC to assemble responses to the composite database. (This procedure will also preserve the name of the tab - very important.)
4. Please pay particular attention to the answers to question 2c on the Org. Info page. More than a third of the responses to this question in the August, 1998 survey were blank or were answered in percent. The desired numbers are the **MW** of Peak Load and Generating Capacity for your reporting organization.
5. The rest of this page is for your use. If you enter any comments here, please make reference to the page name, and the specific question to which your comment applies.
6. The bottom of each page of this questionnaire is **unprotected**. Any comments you have may be entered. All comments received will be collected by subject (page and question) and posted to the NERC website without reference to the submitting organization.
